OUR MISSION

“At Any Time Aligner, we began with a personal struggle—dealing with the pain and discomfort of traditional braces. When we discovered aligner technology, we were excited by its potential but shocked by the high costs, making it inaccessible for most patients.

Determined to change that, we spent three years working with global dental experts, especially in China, to create affordable, high-quality aligners.

Along the way, we listened to dentists’ pain points. Traditional aligners were costly, complicated, and time-consuming, limiting their ability to offer them to patients. We responded by developing a subscription-based model that lowers costs for clinics, streamlines treatment, and ensures faster, more predictable results.

Today, Any Time Aligner provides affordable, accessible aligners for patients, while simplifying the process for dentists—empowering more people to achieve the perfect smile”.

“

TPU is renowned for its unique combination of flexibility, durability, and biocompatibility, making it the ideal choice for orthodontic treatment.”

WHITE-LABEL

Brand aligners and packaging as your own customizable patient materials.

24/7 SUPPORT

Round-the-clock customer service. Dedicated technical support team.

ADVANCED TREATMENT PLANNING SOFTWARE

AI-driven treatment simulations. Access to millions of case data points.

ANYTIME BUTTONS TECHNOLOGY

Proprietary anchor points for enhanced treatment control. Seamless integration with elastics.

EXCLUSIVE TECHNICIAN ASSIGNMENT

Personalized service for your practice. Consistent point of contact for all cases.

TPU Material:

Precision, Comfort, and Safety in Every Aligner

At the heart of our aligners lies Thermoplastic Polyurethane (TPU), a cutting-edge material engineered to deliver exceptional performance, comfort, and reliability.

TPU is renowned for its unique combination of flexibility, durability, and biocompatibility, making it the ideal choice for orthodontic treatment.

Why TPU?

Superior Comfort:

TPU is soft yet resilient, ensuring a snug fit that minimizes discomfort while providing consistent pressure to move teeth effectively.

Durability:

Its high resistance to wear and tear ensures that each aligner maintains its shape and effectiveness throughout the treatment period.

Precision:

TPU's flexibility allows for precise tooth movement, enabling us to achieve optimal treatment outcomes tailored to each patient's unique needs.

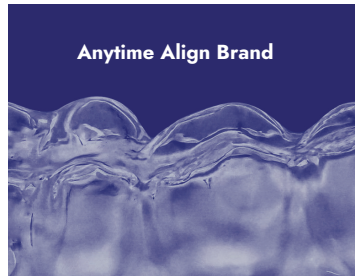

Transparency:

The material is crystal clear, offering a discreet solution for those seeking an invisible orthodontic treatment.

WHY ANYTIME ALIGN

STAND ABOVE THE REST

More Transparent

Designed for near-invisibility, Anytime Align offers a discreet and natural look. Plus, they're more comfortable and resist stains better than other leading aligner brands.

Enhanced for a Better Fit

Crafted with precision-polished and contoured edges, Anytime Align ensure a smoother and more comfortable fit for an improved treatment experience.

Engineered for Stain Resistance.

Our advanced material is designed to resist discoloration, keeping your aligners looking clearer and fresher throughout your treatment.

Safety You Can Trust

Our TPU material is FDA and CE certified, meeting the highest standards of safety and quality. These certifications guarantee that our aligners are biocompatible, free from harmful substances, and suitable for prolonged use in the mouth.

Commitment to Excellence

By choosing TPU, we ensure that every aligner is not only effective but also safe and comfortable for our patients. This commitment to quality is why our aligners stand out in the market, providing a reliable and innovative solution for achieving the perfect smile.

With TPU, you're not just getting an aligner—you're getting a product designed with precision, care, and your well-being in mind.

Modular Treatment Approach

- ✓ 10-Aligner Shipments: Aligners are sent in batches of 10 at a time, allowing real-time adjustments.
- ✓ Dynamic Material & Treatment Adaptation: Unlike traditional providers, we optimize both material and treatment as the case progresses.
- ✓ Before the 10th aligner is placed, a new intraoral scan is conducted, allowing the next set to be prepared and delivered 5 days in advance, ensuring seamless transitions, more accurate tooth movements, fewer delays, and higher treatment success rates by continuously tailoring the plan to the patient's real-time progress.
- ✓ Ethnicity-Based Treatment Planning
- ✓ Beyond Big Databases: More data doesn't always mean better outcomes due to the law of diminishing returns in AI. Instead, ethnicity-specific anatomical variations play a key role in achieving optimal treatment results.

Our Guarantee

Fast Turnaround: Treatment plans delivered within 2 weeks, or receive a discount on the case.

Why It Matters:

- ✓ Bone Structure Variations — Jaw shape, arch width, and bone density differ across ethnic groups, requiring customized treatment strategies.
- ✓ Soft Tissue & Lip Support — Ethnicity influences lip thickness and soft tissue response, affecting esthetic outcomes.
- ✓ Tooth Size & Crowding — Asian populations are more prone to dental crowding, necessitating precise space management and movement strategies.
- ✓ Cultural Aesthetic Preferences — Aligners are designed to match unique esthetic expectations for a natural, personalized smile.

How We Optimize:

- ✓ AI-Trained on Ethnic Data for improved movement predictions.
- ✓ Adaptive Treatment Adjustments to enhance efficiency.
- ✓ Specialized Crowding Solutions for better space management and alignment.
- ✓ By prioritizing quality over quantity in data, we ensure more precise, efficient, and esthetically superior treatment—setting us apart from traditional aligner providers.

SMARTER CLEAR ALIGNER SOLUTIONS

Our subscription-based model makes clear aligner treatment more accessible and affordable. By streamlining the process, we help dental professionals deliver high-quality care with ease, ensuring patients achieve straighter smiles effortlessly.

Industry-Leading Expertise:

Our team consists of industry veterans with proven experience from top aligner companies like Byte, Invisalign, and AngelAlign, backed by prestigious certifications such as GDC and global registrations.

Revolutionary End-to-End Solutions:

We offer a complete suite of services, from advanced treatment planning and production overseen by a global network of orthodontists to private-label aligners with custom branding, packaging, and clinic management software.

Beyond Aligners:

Our services extend to free design of veneers, crowns, and dentures, website development, social media management, and catalog design—all included to help clinics reduce chair time, minimize refinements, and cut costs.

Proven Results:

Multiple clients have experienced a 25% decrease in costs with our 1-year package and a 15% reduction with our 6-month package, thanks to our full range of services and cutting-edge technology.

Empowering Clinics:

We help practices streamline operations, enhance patient satisfaction, and significantly boost profitability, enabling them to thrive in a competitive landscape.

Anytime Align Advantage:

Revolutionize your practice with our subscription-based, white-label clear aligner service. We provide cutting-edge technology, 24/7 support, and dedicated technicians, empowering you to deliver top-tier orthodontic care under your own brand while growing your practice.

Orthodontics, Reimagined: With our world-class expertise, innovative tools, and holistic approach, we're not just delivering aligners—we're reshaping the future of orthodontic care.

ALIGNING ARCHES & CORRECTING DEEP BITE IN 40 STEPS

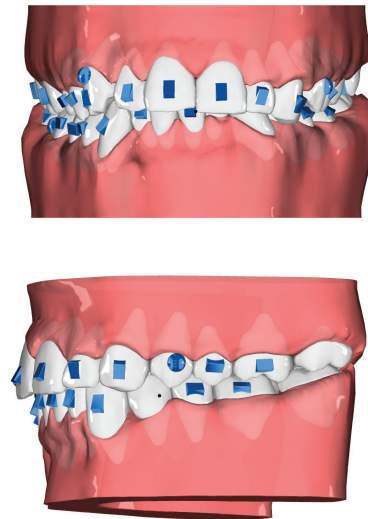

This case presents malaligned upper and lower arches, bimaxillary proclination, and a deep bite. Correction is being achieved through distalization of the maxillary posterior segment, followed by retraction of the maxillary anteriors. Deep bite is addressed with bite turbos placed on the lingual surface of the maxillary anteriors and bite ramps added to the occlusal surface of the mandibular molars.

Additionally, EBTs have been designed to align the mandibular left second premolar. The treatment plan consists of 40 steps, focusing on improving overjet, overbite, and overall arch alignment.
